Skills

Javascript

Typescript

React.js

Node.js

Redis (Caching)

Express

Bash scripting

MongoDB using mongoose

PostgreSQL

Summary

I'm a software developer with over two years' experience. I specialize in React.js, Node.js and well familiar with industry best software development practices. I'm well shrewd with creating user friendly interfaces, providing excellent client-side logic, smooth integration of web applications with apis, excellent at providing client-side authentication and application security.

I perform excellently as an individual and work better and more effectively when assigned to a team. I'm presently learning Python with flask to improve myself and I'm ever ready to provide value to every task assigned to me.

Education

Water Resources Management and Hydrology   Jan 2014 – May 2019
Federal University of Agriculture Abeokuta Graduated with 4.29/5.00 cgpa

Experience

Frontend Developer
Resavation.ng   Technology Used: Next.js, Google firebase
I handled client-side authentication and also created all required UIs for user authentication i.e. login, registration, password-reset and OTP verification pages. I was also responsible for creating live chat UI and also incorporating it with google firebase cloud services

Backend Developer - Volunteer
United States of Africa (usaf)   Technology Used: NodeJS, aws
I was responsible for server-side logic development, performance optimization, api development, integration of third-party services, monitoring and maintenance and security of the application server.

Courses / Training

Alx Africa (Full stack Engineering Bootcamp)   Feb 2023 - present
Java, Udemy   Feb 2022 – Apr 2022
JavaScript, Freecodecamp   Feb 2021

Projects

Revolving   October 2023

This is a full stack Blog application built with React+Typescript (client side) and Node/Express+Typescript (server side). Provides software related contents to software developers and aspirants, it includes a chat section built with socket.io where developers can connect and interact with one another, it also comes with a Task manager, a code editor and also a user profile.
Technology used: React.js, Typescript, Google firebase, react-monaco-editor, Socket.io, Node.js and MongoDB
